Precipitation probability							
30%	80%	40%	20%	30%	40%	40%	40%

Forecast for Tuesday 12 Dec 2023

Weather: A band of rain will moves eastward across the park during the early hours of Tuesday morning, introducing a period of heavy rain and low cloud across the area. Low cloud persisting throughout the day but becoming largely dry for a time during the morning, before showery rain moves across the area from midday. There is a risk during the afternoon that these showers could become slow moving and lead to a spell of persistent rain, although confidence is low on this detail.

Chance of cloud-free hill tops above 600m: 20% throughout

Low cloud and visibility: Low cloud shrouding all hills throughout the day, potentially reaching down to lower levels at times. Visibility therefore expected to be poor or very poor in cloudy and wet conditions.
